

Philippine Tropical Cyclone Attendee Guidance

Tropical cyclones normally occur in the Philippines during the months of June to November. Tropical cyclone advisory bulletins and/or warnings are issued by the Philippine Atmospheric, Geophysical, Astronomical Services Administration (PAGASA) whenever a tropical cyclone is within the Philippine Area of Responsibility (PAR).

Tropical cyclone bulletins are issued by PAGASA every three hours for all tropical cyclones within this area that are currently affecting the country, six hours when cyclones are anticipated to make landfall within the Philippines, or twelve hours when cyclones are not affecting land.

PAGASA uses numbers 1 to 5 for its Public Storm Signal Warning System. Below is the current Warning system and the corresponding meteorological conditions prevailing:

Revised Public Storm Warning System

PSWS	LEAD TIME * (hrs)	WINDS (KPH)	IMPACTS OF THE WIND
#1	36	30 - 60	No damage to very light damage
#2	24	61-120	Light to moderate damage
#3	18	121-170	Moderate to heavy damage
#4	12	171-220	Heavy to very heavy damage
#5	12	more than 220	Very heavy to widespread damage

* On first issuance only.

Latest Public Storm signal warnings are broadcast on radio, television and posted on PAGASA website (<http://bagong.pagasa.dost.gov.ph/weather/weather-advisory>) and Facebook page.

Extreme weather may cause immediate risk, therefore we recognize a duty of care to coordinate the appropriate level of response to initiate pre-planned actions and reduce potential impact.

Regular communications will be issued to facilitate the necessary actions in the days prior and during any occurrence via our fair website, social media, onsite briefings and venue announcements.
